EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Dicran Halajian on 8/27/06.

The application has been amended as follows:

Claim 1, lines 4-5, "and having pressure points" have been changed to – having printed circuits connected to respective male terminals thereon and having pressure points extending upwardly therefrom --.

Claim 5, lines 3-4, "and is provided with ... to the male terminals" have been deleted.

Claim 9, line 5, line 5, "connectable" has been changed to – connected --; line 7, -- extending upwardly therefrom – have been inserted after "point"; last line "." has been changed to -- ; -- and new lines have been inserted after the last line as following:

-- wherein the socket includes at least one electrically conducting female terminal, and the back plate includes at least one mating electrically conducting male terminal such that, when the back plate is moved towards the socket, the male terminal is inserted with friction into the female terminal so to hold the back plate and socket together and to position the at least one pressure point with respect to the click. --.

Claim 12 has been canceled.

Claim 15, line 3, "contacting a" have been changed to – contacting an upwardly extending --; last line "." has been changed to -- ; -- and new lines have been inserted after the last line as following:

-- wherein the distance is such that the annular spring presses the socket towards the reflector with a force of at least 5N;
wherein the socket includes at least one electrically conducting female terminal, and the back plate includes at least one mating electrically conducting male terminal such that, when the back plate is moved towards the socket, the male terminal is inserted with friction into the female terminal so to hold the back plate and socket together and to position the at least one pressure point with respect to the click. --.

Claims 16 and 18 have been canceled.

Claim 19, line 3, "when in contact with" have been changed to – extending upwardly from the back plate and when the at least one pressure point in contact with an arm provided with --; last line "." has been changed to -- ; -- and new lines have been inserted after the last line as following:

-- wherein the socket includes at least one electrically conducting female terminal, and the back plate includes at least one mating electrically conducting male terminal such that, when the back plate is moved towards the socket, the male terminal is inserted with friction into the female terminal so to hold the back plate
